

THIS INFORMATION IS VITAL TO THE PROCESSING OF YOUR ROOF ORDER.

Please note:

It is the customer's responsibility to provide adequate support for the box gutter at the required centres and at any joints. Unless instructed otherwise it will be at Synseal's discretion as to where a joint in the box gutter will be located. It is also the customer's responsibility to provide adequate downpipe outlets for the box gutter. Synseal recommend an outlet be positioned at each available open end of the box gutter.

Synseal also recommend the use of lead flashing (not supplied) on the vertical face of the box gutter over the wallplate and box gutter joints. Insulation and dadding of the internal vertical face is the responsibility of the customer.
