

## MCP-VENT CONTROL PANEL IN WHITE

Thermostatic vent motor controller with rain sensor (5 amp max without remote contactors).  
On detection of rain, vents will close automatically (see installer functions).

### USER FUNCTIONS

The three modes are selectable by pushing the centre knob or via remote control. Each click will advance to the next setting and will be confirmed by the colour of the mode LED.

- In auto mode, the vents will open or close depending on temperature setting and weather.
- In manual close mode, the vents will stay closed.
- In manual open mode, the vents will stay open (unless rain detector option is set).

### INSTALLER FUNCTIONS

The installer has the following options:

1. Detect rain and close in auto only, or detect rain and closes in auto and manual (red rain LED will illuminate). *This gives the customer the option in manual mode to let rain in (greenhouse etc) or the safeguard to keep rain out (carpets, furniture etc).*
2. The on board temperature sensor can be disabled in preference to an optional remote sensor. *This is useful for locating panel in an adjacent room or taking remote air temperature if panel is situated in direct sunlight.*
3. If using remote control, the panel can be set to accept channel 1 or 2. *This means two panels can be installed together and one remote will operate both.*

### OPTIONS

Available finishes will be polished chrome, brass, satin chrome, antique bronze and brushed chrome, all with matching knobs and fixing screws.

Optional extras will be remote thermostat and remote control keyfobs (1 or 2 button).
